Product Bulletin   Doc. No. 34725A01

Serial numbers with bar code marking

Announcement   STOCKHOLM 2017-09-22

Interspiro has introduced a new system for serial number marking in order to support full traceability and service history of key components.

The new marking is present on products delivered after 1st September 2017.

The serial number consist of a first letter defining the type of component (see pictures below), followed by two digits for Year, two digits for Calendar week and finally a three digit running number. For example, A1737001, means component type A=Apparatus, 17=Year 2017, 37=Calendar week 37 and 001 is the running number.

Complete SCBA & Complete SCUBA

* Bar code label placed on backplate
* Serial number starts with "A"

Other complete units, such as E.A.S.E. units, also have serial number starting with "A".

Face Mask

* Bar code label placed on visor frame
* Serial number starts with "M"
